

The background features abstract, overlapping geometric shapes in various shades of green, ranging from light lime to dark forest green. The shapes are primarily triangles and polygons, creating a dynamic, layered effect. The central text is positioned in the white space between these green elements.

New and Simple Method to Prevent Prostate Cancer and Reduce PSA

Most men over the age of 60 in our country
suffer from prostate cancer

Surgery is a common solution for the treatment of Malignant prostate cancer

And Next

They use medicine with high complications and Radiotherapy

or

Chemotherapy

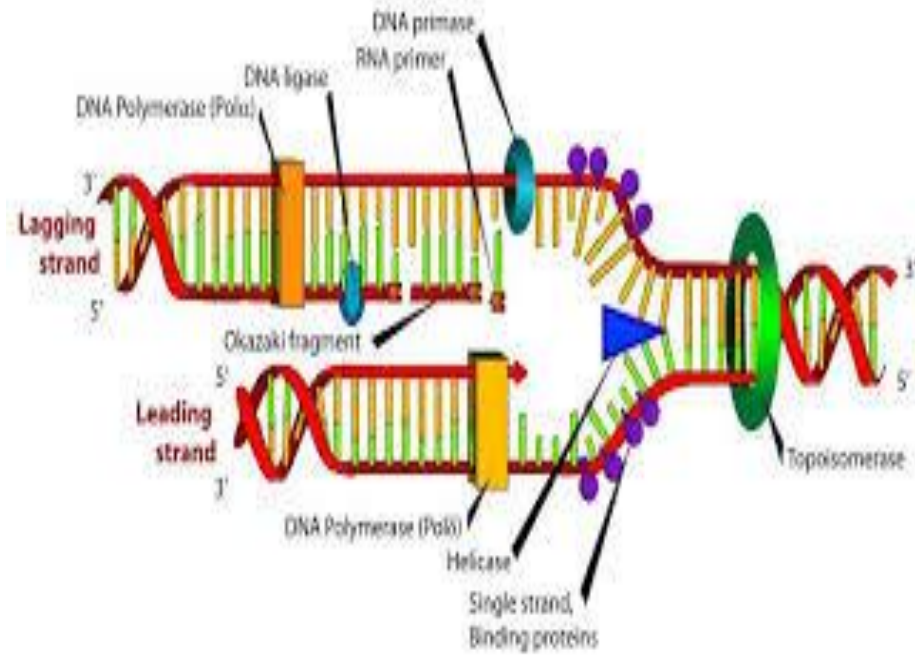

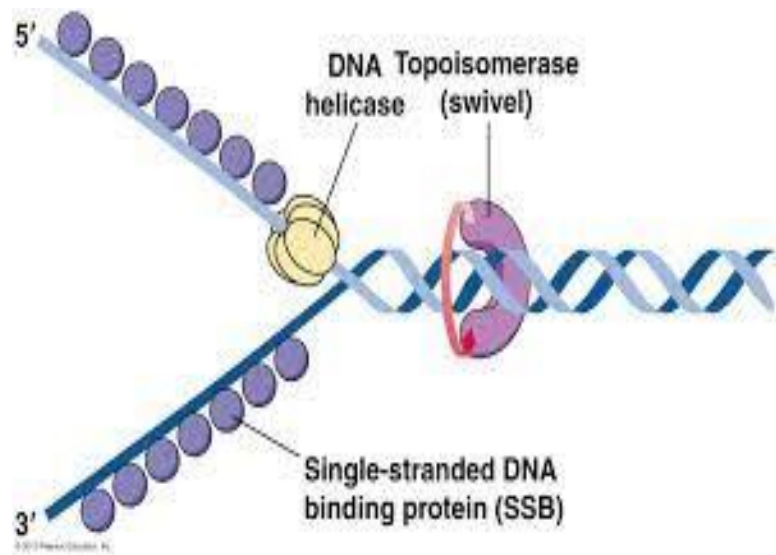

All available ways have a lot of side effects
and greatly reduces men's ability

Today

I want to present **simple** method to prevent
prostate cancer but more **effective**

I completely examined the entire process of reproduction of a prostate cancer cell from beginning to end

And I realized that during this steps, an enzyme DNA Topoisomerase II activates that plays an effective role in cell proliferation

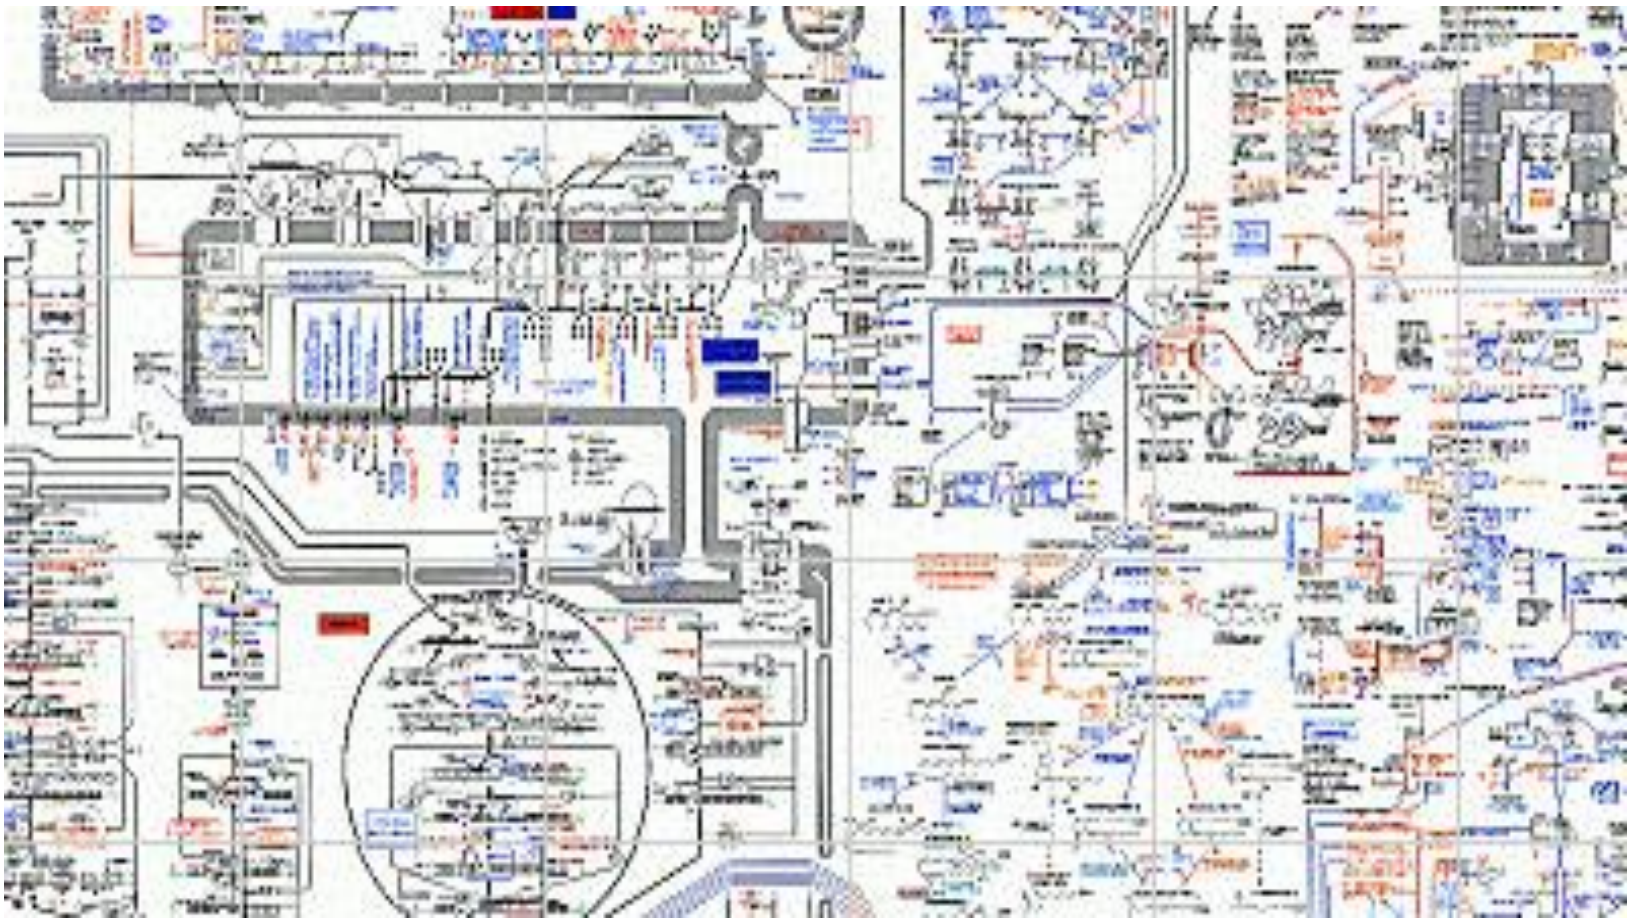

Whit Using the human genetic map and QSAR software I turned off the gen of this enzyme and the result was that cell proliferation **stopped**

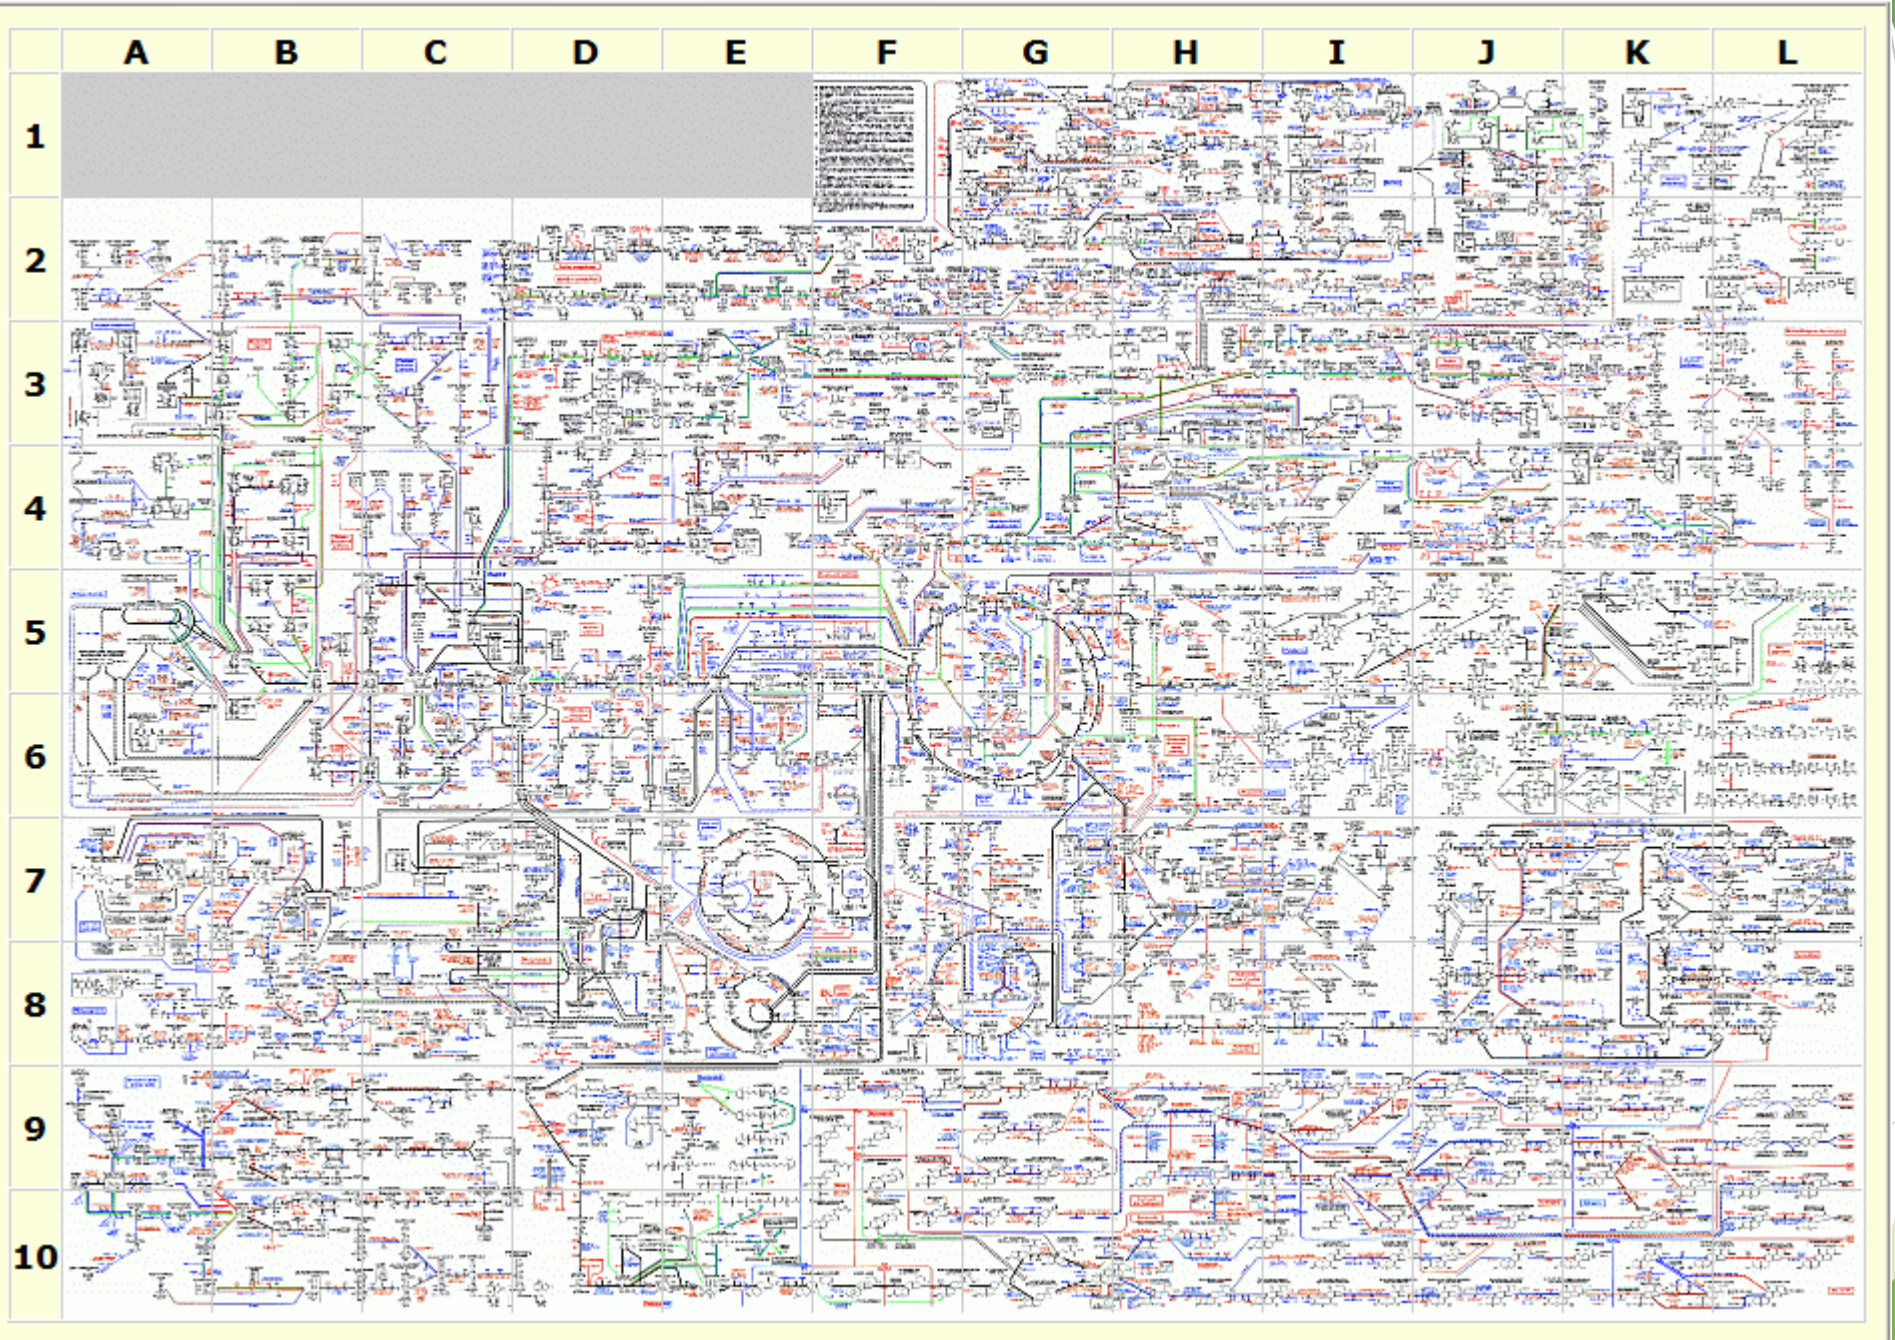

Thus

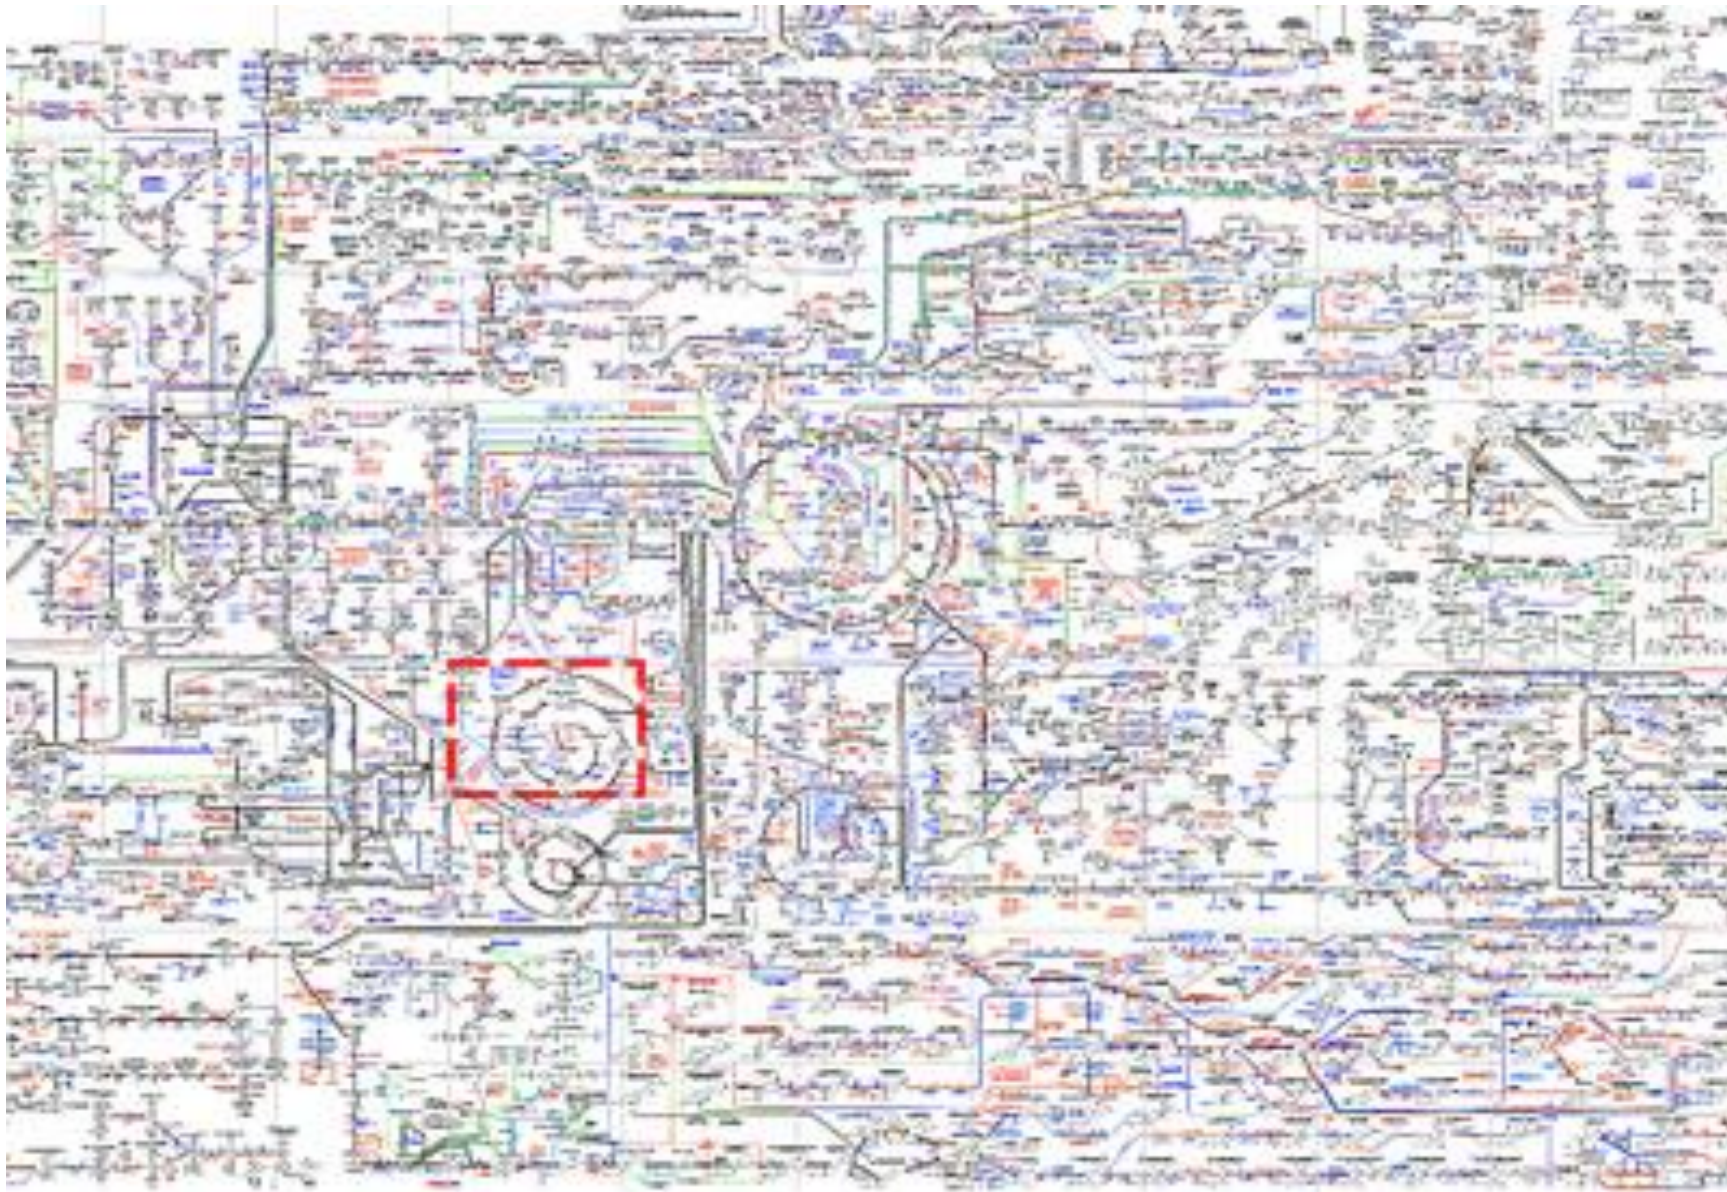

If we can stop this enzyme
we can stop cell proliferation

And next I found the nearly hole pathway for the synthesis of the surface proteins that the cell absorbs the amino acids of glutamine with theirs from

biochemical pathway

And next I come with using the softwares same as [Auto-Dock Vina4](#) , [PYRX](#) , [Chimera](#) , [Hyper Chem](#) tested different materials to inhibit Allosteric Enzymes The pathways for synthesizing these surface proteins to absorb glutamine

And I found

2 materials resveratrol and ursolic acid can inhibit all of the Allosteric Enzymes of these pathways

and next I researching and I found that resveratrol exist in black pigments in black grape and ursolic acid exist in red pigment in red skins apples

We know from previous studies that curcumin stimulates apoptosis in prostate cancer cells

And I searching and I realized that curcumin exist Turmeric

Eventually, I got a combination of turmeric and black grape and red apple peel, which I claim to be able to prevent the proliferation of prostate cancer cells

Thus

Can be used to prevent prostate cancer

And

we can destroy prostate cancer cells
anywhere in the body

Thanks for your attentions
